**RE: Federal New Minor Source Review Program in Indian Country  
Registration for Existing Sources  
EP Energy E&P Company, L.P.  
Dye 1-25Z2**

Dear Ms. Smith:

On behalf of EP Energy E&P Company, L.P. (EP Energy), Peakview Environmental, LLC (Peakview) is submitting the enclosed Registration for Existing Sources for the Dye 1-25Z2 well site. The well site began production on October 9, 1982.

On October 30, 2018 the Utah Department of Environmental Quality, Division of Air Quality (UDAQ) notified EP Energy that the site was located within USEPA's boundary of Indian Country and is not under the jurisdiction of UDAQ. Therefore, EP Energy is submitting this Registration for Existing Sources under the USEPA Federal Minor New Source Review Program in Indian Country.

Please contact Chelsea Cantrelle, EP Energy at [chelsea.cantrelle@epenergy.com](mailto:chelsea.cantrelle@epenergy.com) or me at [julie.spear@epenergy.com](mailto:julie.spear@epenergy.com) with any questions.

Sincerely,

PEAKVIEW ENVIRONMENTAL, LLC

Julie Spear, PE  
Principal Engineer

FEDERAL MINOR NEW SOURCE REVIEW PROGRAM IN INDIAN  
COUNTRY  
40 CFR 49.151**

**Registration for Existing Sources  
(FORM REG)**

**Use of this information request form is voluntary and not yet approved by the Office of Management and Budget.** The following is a check list of the type of information that Region 8 will use to process information on your registration. While submittal of this form is not required, it does offer details on the information we will use to complete your registration and providing the information requested will help build an existing source emissions inventory. Use of application forms for this program is currently under Office of Management and Budget review and these information request forms will be replaced/updated after that review is completed.

**Please submit information to following two entities:**

Federal Minor NSR Permit Coordinator  
U.S. EPA, Region 8  
1595 Wynkoop Street, 8P-AR  
Denver, CO 80202-1129  
[R8airpermitting@epa.gov](mailto:R8airpermitting@epa.gov)

For more information, visit:

**C. ATTACHMENTS****Include all of the following information as attachments to this form**

Narrative description of the operations

Identification and description of all emission units and air pollution generating activities (with the exception of the exempt emissions units and activities listed in §49.153(c))

Identification and description of any existing air pollution control equipment and compliance monitoring devices or activities

Type and amount of each fuel used

Type raw materials used

Production Rates

Operating Schedules

Any existing limitations on source operations affecting emissions or any work practice standards, where applicable, for all regulated NSR pollutants at your source.

Total allowable (potential to emit if there are no legally and practically enforceable restrictions) emissions from the air pollution source for the following air pollutants: particulate matter, PM<sub>10</sub>, PM<sub>2.5</sub>, sulfur oxides (SO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), carbon monoxide (CO), volatile organic compound (VOC), lead (Pb) and lead compounds, fluorides (gaseous and particulate), sulfuric acid mist (H<sub>2</sub>SO<sub>4</sub>), hydrogen sulfide (H<sub>2</sub>S), total reduced sulfur (TRS) and reduced sulfur compounds, including all calculations for the estimates.

Estimates of the total actual emissions from the air pollution source for the following air pollutants: particulate matter, PM<sub>10</sub>, PM<sub>2.5</sub>, sulfur oxides (SO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), carbon monoxide (CO), volatile organic compound (VOC), lead (Pb) and lead compounds, fluorides (gaseous and particulate), sulfuric acid mist (H<sub>2</sub>SO<sub>4</sub>), hydrogen sulfide (H<sub>2</sub>S), total reduced sulfur (TRS) and reduced sulfur compounds, including all calculations for the estimates.

Other

The public reporting and recordkeeping burden for this collection of information is estimated to average 6 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, Collection Strategies Division, U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

**D. TABLE OF ESTIMATED EMISSIONS**

The following estimates of the total emissions in tons/year for all pollutants contained in your worksheet stated above should be provided.

<b>Pollutant</b>	<b>Total Actual Emissions (tpy)</b>	<b>Total Allowable or Potential Emissions (TPY)</b>	
<b>PM</b>	0.16	0.16	PM - Particulate Matter PM <sub>10</sub> - Particulate Matter less than 10 microns in size PM <sub>2.5</sub> - Particulate Matter less than 2.5 microns in size SO <sub>2</sub> - Sulfur Oxides NO <sub>x</sub> - Nitrogen Oxides CO - Carbon Monoxide VOC - Volatile Organic Compound Pb - Lead and lead compounds Fluorides - Gaseous and particulates H <sub>2</sub> SO <sub>4</sub> - Sulfuric Acid Mist H <sub>2</sub> S - Hydrogen Sulfide TRS - Total Reduced Sulfur RSC - Reduced Sulfur Compounds
<b>PM<sub>10</sub></b>	0.16	0.16	
<b>PM<sub>2.5</sub></b>	0.16	0.16	
<b>SO<sub>2</sub></b>	0.00	0.00	
<b>NO<sub>x</sub></b>	2.15	2.15	
<b>CO</b>	1.80	1.80	
<b>VOC</b>	7.99	7.99	
<b>Pb</b>	NA	NA	
<b>Fluorides</b>	NA	NA	
<b>H<sub>2</sub>SO<sub>4</sub></b>	NA	NA	
<b>H<sub>2</sub>S</b>	0.00	0.00	
<b>TRS</b>	0.00	0.00	
<b>RSC</b>	0.00	0.00	

Emissions calculations must include fugitive emissions if the source is one the following listed sources, pursuant to CAA Section 302(j):

- |  |  |
|--|--|
| <ul style="list-style-type: none"> <li>(a) Coal cleaning plants (with thermal dryers);</li> <li>(b) Kraft pulp mills;</li> <li>(c) Portland cement plants;</li> <li>(d) Primary zinc smelters;</li> <li>(e) Iron and steel mills;</li> <li>(f) Primary aluminum ore reduction plants;</li> <li>(g) Primary copper smelters;</li> <li>(h) Municipal incinerators capable of charging more than 250 tons of refuse per day;</li> <li>(i) Hydrofluoric, sulfuric, or nitric acid plants;</li> <li>(j) Petroleum refineries;</li> <li>(k) Lime plants;</li> <li>(l) Phosphate rock processing plants;</li> <li>(m) Coke oven batteries;</li> <li>(n) Sulfur recovery plants;</li> <li>(o) Carbon black plants (furnace process);</li> <li>(p) Primary lead smelters;</li> <li>(q) Fuel conversion plants;</li> </ul> | <ul style="list-style-type: none"> <li>(r) Sintering plants;</li> <li>(s) Secondary metal production plants;</li> <li>(t) Chemical process plants</li> <li>(u) Fossil-fuel boilers (or combination thereof) totaling more than 250 million British thermal units per hour heat input;</li> <li>(v) Petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels;</li> <li>(w) Taconite ore processing plants;</li> <li>(x) Glass fiber processing plants;</li> <li>(y) Charcoal production plants;</li> <li>(z) Fossil fuel-fired steam electric plants of more than 250 million British thermal units per hour heat input, and</li> <li>(aa) Any other stationary source category which, as of August 7, 1980, is being regulated under section 111 or 112 of the Act.</li> </ul> |
|--|--|

## Instructions

Please answer all questions. If the item does not apply to the source and its operations write “n/a”. If the answer is not known write "unknown".

### A. General Source Information

1. Company Name & Operator Name (if the operator of the facility is different than the owner, please provide this information): Provide the complete company and operator names. For corporations, include divisions or subsidiary names, if any.
2. Facility Name: Provide the facility name. Please note that a facility is a site, place, location, etc... that may contain one or more air pollution emitting units.
3. Type of Operation: Indicate the generally accepted name for the operation (i.e., asphalt plant, gas station, dry cleaner, sand & gravel mining, oil and gas wellsite, tank battery, etc.).
4. Portable Source: Will this facility operate in more than one location? Some examples of portable sources include asphalt batch plants and concrete batch plants.
5. Temporary Source: A temporary source, in general, would have emissions that are expected last less than 12 months.
6. NAICS Code: North American Industry Classification System. The NAICS Code for your facility can be found at the following link → [North American Industry Classification System](http://www.census.gov/epcd/naics/nsic2ndx.htm#S1) (<http://www.census.gov/epcd/naics/nsic2ndx.htm#S1>).
7. SIC Code: Standard Industrial Classification Code. Although the new North American Industry Classification System (NAICS) has replaced the SIC codes, much of the Clean Air Act permitting processes continue to use these codes. The SIC Code for your facility can be found at the following link → [Standard Industrial Classification Code](http://www.osha.gov/pls/imis/sic_manual.html) ([http://www.osha.gov/pls/imis/sic\\_manual.html](http://www.osha.gov/pls/imis/sic_manual.html)).
8. Physical Address: Provide the actual address of where you are proposing to construct the new facility, not the mailing address. Include the State and the ZIP Code.
9. Reservation: Provide the name of the Indian reservation within which the facility will be constructed.
10. County: Provide the County within which the source will be constructed.
- 11a & 11b. Latitude & Longitude: These are GPS (global positioning system) coordinates.
- 12a – 12d. Section-Township-Range: Please provide these coordinates in 1/4 Section/Section/Township/Range. (e.g., SW 1/4, NE 1/4 S36/T10N/R21E).

## **B. Contact Information**

Please provide the information, requested, in full.

1. Company Contact: Provide the full name of the primary contact for the company that owns the facility.
2. Operator Contact: Provide the name of the primary contact for the company that operates the facility if the company operating the facility is different from the company that owns the facility.
3. Permitting Contact: Provide the name of primary contact, for permitting decisions, at the company that owns the facility or the company that operates the facility.
4. Compliance Contact: Provide the name of primary contact, responsible for compliance of the facility, at the company that owns the facility or the company that operates the facility. If this is the same as the Permitting Contact please note this on the form.

## **C. Attachments**

The information requested in the attachments will enable EPA to understand the type of source being registered and the nature and extent of the air pollutants being emitted.

## **D. Total Emissions**

1. Allowable Emissions (See also, Potential to Emit): Emissions rate of a source calculated using the maximum rated capacity of the source (unless the source is subject to practically and legally enforceable limits which restrict the operating rate, or hours of operation, or both) and the most stringent of the following:
  - a) Any applicable standards as set forth in 40 CFR parts 60 and 61;
  - b) Any applicable Tribal or Federal Implementation Plan emissions limitation, including those with a future compliance date; or
  - c) Any emissions rate specified as a federally enforceable permit condition, including those with a future compliance date.
2. Potential to Emit: The maximum capacity of a source to emit a pollutant under its physical and operational design. Any physical or operational limitation on the capacity of the source to emit a pollutant, including air pollution control equipment and restrictions on hours of operation or on the type or amount of material combusted, stored, or processed, shall be treated as part of its design if the limitation or the effect it would have on emissions is enforceable as a practical matter. See Allowable Emissions.
3. Actual Emissions: Estimates of actual emissions must take into account equipment, operating conditions, and air pollution control measures. For a source that operated during the entire calendar year preceding the initial registration submittal, the reported actual emissions typically should be the annual emissions for the preceding calendar year, calculated using the actual

operating hours, production rates, in-place control equipment, and types of materials processed, stored, or combusted during the preceding calendar year. However, if you believe that the actual emissions in the preceding calendar year are not representative of the emissions that your source will actually emit in coming years, you may submit an estimate of projected actual emissions along with the actual emissions from the preceding calendar year and the rationale for the projected actual emissions. For a source that has not operated for an entire year, the actual emissions are the estimated annual emissions for the current calendar year.

4. The emission estimates can be based upon actual test data or, in the absence of such data, upon procedures acceptable to the Reviewing Authority. The following procedures are generally acceptable for estimating emissions from air pollution sources:
  - (i) Source-specific emission tests;
  - (ii) Mass balance calculations;
  - (iii) Published, verifiable emission factors that are applicable to the source. (i.e., manufacturer specifications).
  - (iv) Other engineering calculations; or
  - (v) Other procedures to estimate emissions specifically approved by the Reviewing Authority.
5. Guidance for estimating emissions can be found at <http://www.epa.gov/ttn/chief/efpac/index.html>.

## 1.0 INTRODUCTION

EP Energy E&P Company L.P. (EP Energy) owns and operates the Dye 1-25Z2 site (site), an existing oil and gas production site located in Duchesne County, Utah. The site began production on October 9, 1982. The site services one well, Dye 1-25Z2 , API# 43-013-30659. For the period January 1, 2018 through December 31, 2018 the production rate for the well was 10.1 barrels of oil per day (BOPD) or 3,672 barrels of oil per year (BOPY).

Previously, the Dye 1-25Z2 site was considered a small source under the jurisdiction of the Utah Department of Environmental Quality, Division of Air Quality (UDAQ). In July 2018, per Utah Administrative Code R307-505, EP Energy submitted a Permit by Rule registration for existing sources. On October 30, 2018 EP Energy was notified by UDAQ that the Dye 1-25Z2 site lies within the EPA's boundary for Indian Country and is not under the jurisdiction of UDAQ. Therefore, EP Energy is submitting this Registration for Existing Sources under the USEPA Federal Minor New Source Review Program in Indian Country.

### 1.1 Site Description

Equipment/emission sources currently located at the site consist of the following:

- Two (2) 480-bbl heated oil storage tanks
- One (1) 480-bbl heated produced water storage tank
- One (1) 240-bbl heated overflow storage tank
- Tank heaters and heater treater (<5.0MMBtu/hr combined)
- Oil and produced water truck loading
- Equipment fugitives
- Electric pump jack

## 2.0 PROCESS DESCRIPTION

The Dye 1-25Z2 site includes one wellhead with separation and storage capability and produces approximately 3,700 BOPY. The site operates 8,760 hours per year. A general process flow diagram and site plan are included in Appendix A.

Well production is brought to the surface via an electric pump jack and routed to a heater treater to separate the well fluids into three constituent phases: oil, gas and water. The separated oil phase is routed to the heated oil storage tanks prior to truck transport offsite to sales. The separated water phase is routed to the heated produced water storage tank prior to being transported offsite for disposal. Both oil and produced water is transferred to tanker trucks utilizing the submerged loading method. The separated gas phase is routed to the gas sales pipeline. During an emergency upset condition oil or produced water may be rerouted to an overflow tank.

The heater treater and heated storage tanks are heated using steam tracing that utilizes a steam boiler. The natural gas fuel for the heaters is residual from the natural gas processing plant and is assumed to be pipeline specification quality.

Oil and produced water tank emissions and oil and water truck loading emissions are uncontrolled.

### 3.0 EMISSION CALCULATIONS

Emission calculations for this registration are included in Appendix B of this document. Calculation methodologies for each emission source are discussed in the following sections.

#### 3.1 Representative Analysis

Emissions calculations are based on a liquid sample collected from the separator at the Powell 2-13A2 facility on June 17, 2016. Laboratory analysis of the flash gas evolved from hydrocarbon liquid and extended hydrocarbon analysis of the liquids were conducted on this sample. The laboratory report is included in Appendix B.

#### 3.2 Green House Gas Emissions

Uncontrolled greenhouse gas (GHG) emissions were calculated using CO<sub>2</sub> and CH<sub>4</sub> emissions, AP-42 emission factors and 40 CFR 98 Subpart C emission factors. Total GHG emissions in CO<sub>2</sub>e (tpy) were calculated using Global Warming Potentials from 40 CFR 98 Subpart A, Table A-1. emissions are

#### 3.3 Storage Tanks

##### 3.3.1 Oil Storage Tanks

Tank flash losses from the oil storage tanks were calculated using the gas-to-oil ratio (GOR) measured by laboratory procedures method and the flash gas composition from the laboratory flash liberation of liquid hydrocarbon analysis.

Working and standing emission losses from the oil storage tanks were calculated using EPA TANKS 4.09d to determine total annual emissions from the tanks. The output from a Promax simulation using the stable oil option was used to speciate the total emissions from the TANKs report. The detailed TANKs report and the Promax output are included in Appendix B.

##### 3.3.2 Produced Water Storage Tank

The well fluids undergo separation in the heater treater where oil/water/gas are separated. Low levels of dissolved hydrocarbons remain in the produced water. Produced water VOC emissions are estimated by taking a 99% reduction from the oil VOC emissions.

##### 3.3.3 Overflow Storage Tank

The overflow tank remains empty except in emergency upset conditions when either the oil or produced water tanks are rerouted to the overflow tank. The overflow tank is emptied when practicable following the upset event. Total site production/throughput is not affected by the use of the of the overflow tank therefore; use of the tanks does not affect the site-wide VOC emissions.

#### 3.4 Crude Oil and Produced Water Loading

Uncontrolled crude oil truck loading emissions were calculated using the AP-42 Section 5.2, Equation 1 and submerged loading constants from Table 5.2-1. Produced water emissions are assumed to be

negligible due to the low concentrations of dissolved VOCs present in the produced water. To account for the water emissions, an additional 1% VOC emissions is added to and included in the oil loading emissions.

### 3.5 Heaters

The combined heater emissions were calculated using AP-42 Section 1.4 emission factors. Pipeline quality natural gas is used as fuel for the heaters.

### 3.6 Equipment Fugitives

Equipment fugitives were calculated using the flash gas composition and 40 CFR 98 Subpart W emission factors. Component counts were estimated based on 40 CFR 98, Subpart W, Table W-1B.

#### 4.0 FEDERAL REGULATORY APPLICABILITY ANALYSIS

The following section addresses the applicability of Federal Standards for the affected facilities at the site.

The facility is not located within a designated non-attainment area for purposes of determining Federal Non-Attainment New Source Review permitting applicability, the Facility is not an existing major source for purposes of evaluating the applicability of Prevention of Significant Deterioration (PSD) review requirements.

##### 4.1 New Source Performance Standards (40 CFR Part 60)

###### Subpart IIII: Standards of Performance for Stationary Compression Ignition Internal Combustion Engines

This subpart is not applicable, there are no compression ignition internal combustion engines at the site.

###### Subpart JJJJ: Standards of Performance for Stationary Spark Ignition Internal Combustion Engines

This subpart is not applicable, there are no spark ignition internal combustion engines at the site.

###### Subpart Kb: Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced after July 23, 1984

This subpart does not apply to the storage tanks because they are used to store petroleum or condensate prior to custody transfer, and the design capacity of each tank does not exceed 1,589.874 m<sup>3</sup> (3,061,721 gallons) according to 40 CFR §60.110b(d)(4).

###### Subpart KKKK: Standards of Performance for New Stationary Combustion Turbines

There are no stationary combustion turbines located at the site; therefore, this subpart does not apply.

###### Subpart OOOO/OOOOa: Standards of Performance for Crude Oil and Natural Gas Production, Transmission, and Distribution

This is an existing well site completed in 1982, prior to the applicability of subpart OOOO and has not been modified after the applicability date of Subpart OOOOa, therefore; the well site is not subject to the requirements of these subparts.

#### 4.2 National Emission Standards for Hazardous Air Pollutants (40 CFR Part 63)

##### Subpart DDDDD: National Emission Standards for Major Sources: Industrial, Commercial and Institutional Boilers and Process Heaters

The site is not a major source therefore the site is not subject to this subpart.

##### Subpart HH: National Emissions Standards for Hazardous Air Pollutants from Oil and Natural Gas Production Facilities

The facility does not have a TEG dehydration unit; therefore, the facility is not subject to this subpart according to 40 CFR §63.760(b)(2).

##### Subpart HHH, National Emissions Standards for Hazardous Air Pollutants from Natural Gas Transmission and Storage Facilities

The facility is not a natural gas transmission and storage facility as defined in 40 CFR §63.1270 therefore; this subpart does not apply.

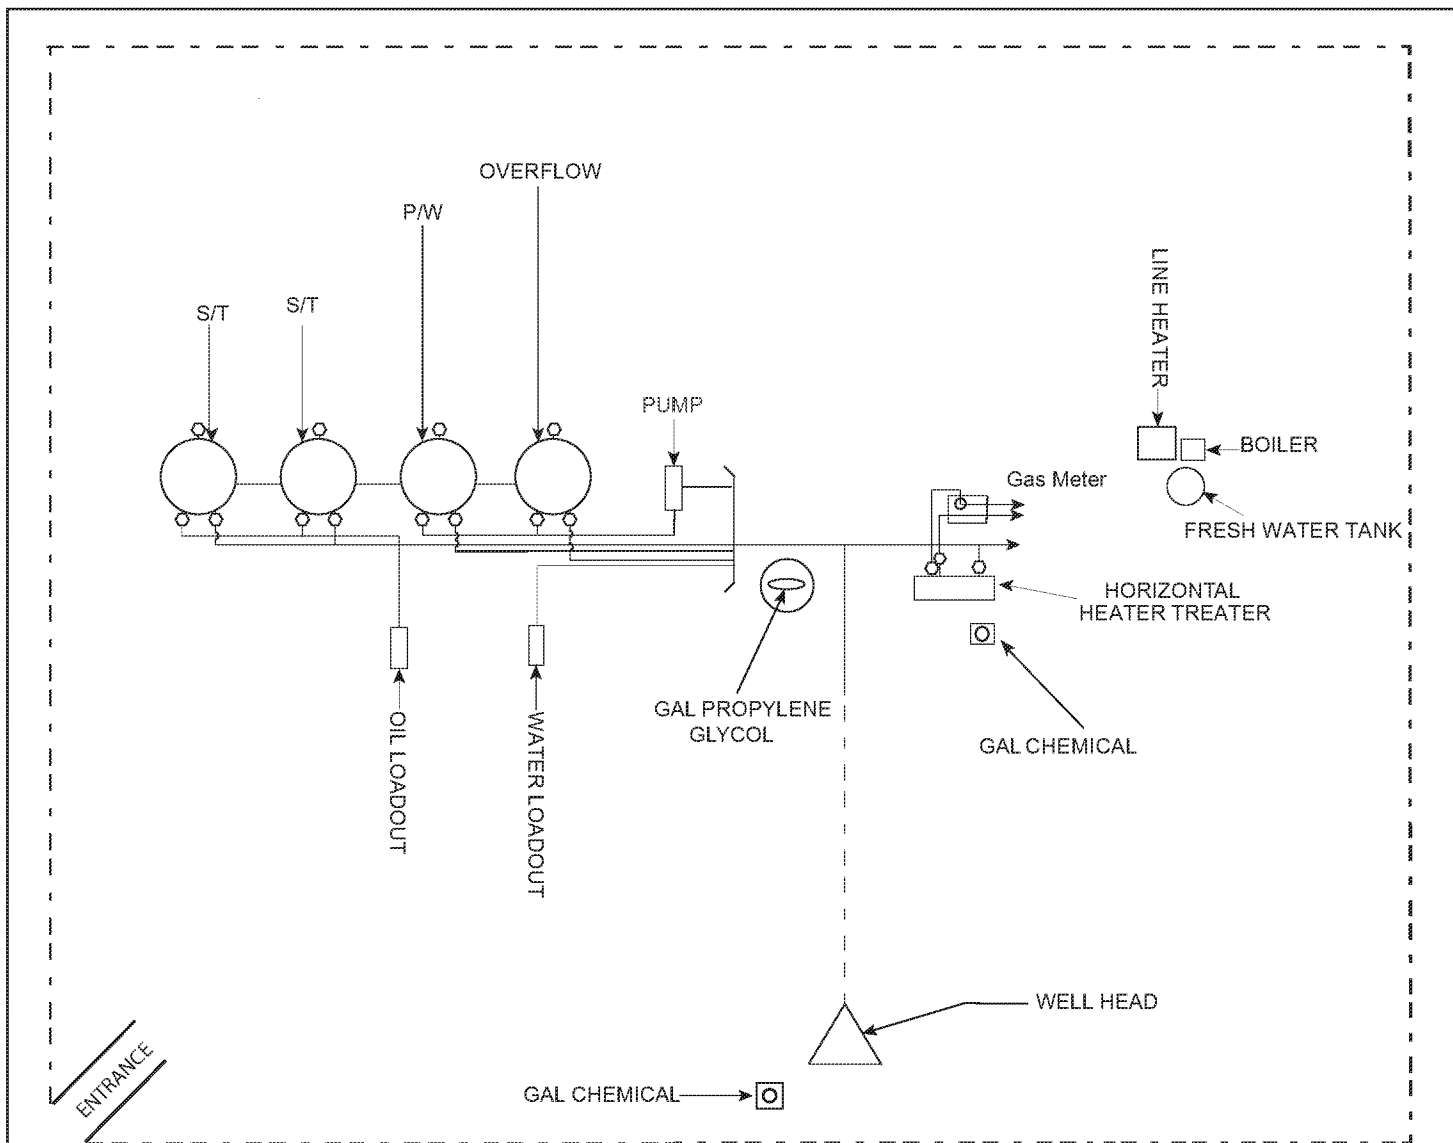

##### Subpart ZZZZ: National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines

There are no stationary internal combustion engines located at the site; therefore, this subpart does not apply.

**EXTENDED HYDROCARBON LIQUID STUDY  
CERTIFICATE OF ANALYSIS**

Company: **LT Environmental** Sample Name: **Powell 2-13 A2 Pressurized Liquid**

Sample Date: 6/17/2016 Sample Number: 16060602-01

Sample Facility: Not Indicated Date Tested: 6/22/2016

Sample Equipment: Treater Vessle Test Method: GPA 2186M

Sample Location: Duchesne Date Reported: 6/22/2016

Sample Pressure: 81 PSIG

Sample Temperature: 155°F

Sampling Method: GPA-2174

Type Sample: Spot

## **SAMPLE CHARACTERISTICS**

RELATIVE SPECIFIC GRAVITY, calculated	<b>0.76239</b>
API GRAVITY AT 60/60 F, calculated	<b>54.1</b>
TRUE VAPOR PRESSURE AT 100 F, PSIA, calculated	<b>83.856</b>
AVERAGE MOLECULAR WEIGHT	<b>205.670</b>
AVERAGE BOILING POINT, F, calculated	<b>477.926</b>
RELATIVE SPECIFIC GRAVITY OF DECANES+ (C10+) FRACTION, calculated	<b>0.76697</b>
AVERAGE MOLECULAR WEIGHT OF DECANES+ (C10+) FRACTION, calculated	<b>215.149</b>
BTU / GALLON OF LIQUID AT 14.73 PSIA, calculated	<b>59,364.49</b>
LBS / GALLON OF LIQUID, calculated	<b>6.356</b>

NOTATION: ALL CALCULATIONS PERFORMED USING PHYSICAL CONSTANTS FROM GPA 2145-09, THE TABLES  
OF PHYSICAL CONSTANTS FOR HYDROCARBONS AND OTHER COMPOUNDS OF INTEREST  
TO THE NATURAL GAS INDUSTRY.

## **TANKs 4.09d Emissions Report**

**TANKS 4.0.9d**  
**Emissions Report - Detail Format**  
**Tank Identification and Physical Characteristics**

**Identification**

User Identification:	480 bbl storage tank
City:	Salt Lake City
State:	Utah
Company:	EP Energy E&P Company LP
Type of Tank:	Vertical Fixed Roof Tank
Description:	Dye 1-25Z3 Duchesne County, UT

**Tank Dimensions**

Shell Height (ft):	24.00
Diameter (ft):	13.50
Liquid Height (ft) :	20.00
Avg. Liquid Height (ft):	18.00
Volume (gallons):	21,415.12
Turnovers:	3.60
Net Throughput(gal/yr):	77,883.00
Is Tank Heated (y/n):	Y

**Paint Characteristics**

Shell Color/Shade:	Gray/Light
Shell Condition:	Good
Roof Color/Shade:	Gray/Light
Roof Condition:	Good

**Roof Characteristics**

Type:	Dome
Height (ft)	0.00
Radius (ft) (Dome Roof)	13.50

**Breather Vent Settings**

Vacuum Settings (psig):	0.00
Pressure Settings (psig)	0.00

Meteorological Data used in Emissions Calculations: Salt Lake City, Utah (Avg Atmospheric Pressure = 12.64 psia)
